To whom it may concern:

RECOMMENDATION SECUTRON FIRE AND INTEGRATED SYSTEMS

We as Diesel Innovations would like to use this opportunity to recommend Secutron Fire and Integrated systems to any company that would like to utilize them for any fire prevention services.

Diesel Innovations worked with them on a few occasions. The most recent project that we worked together, was UNISA. They did meticulous work. On their own initiative and without remuneration, they wrote an impressive report with recommendations. Based on the report, UNISA allowed a variation order about three times the original order amount. They were also complimented by a fire specialist of Aurecon.

Without hesitation, we can say that they are knowledgeable, trustworthy, respond on time, professional and a pleasure to work with.

We believe that you will have the same experience as we did so far, working with them.

Kind regards,

Anet van Heerden
Operations manager
